

DETAILS OF COMPLIANCE ON THE EDITORS COMMENT

Sl. No.	Editors comment	Compliance details
1.	You should give some remarks on your recommendation treatment whether is economical or not in terms of farmer practices	The comment has been completely re-written as desired by incorporating all suggestions. (Line No. :18-19)
2.	Under the Material and Methods, you must give about experimental design, statistical evaluation methods. Irrigation details and methods, how much water etc?	The comment under the Material and Methods has been revised and re-written by incorporating experimental design (line no. 68-69) and statistical evaluation methods (line no. :81). Revised and re-written as desired (line no. :77-78).
3.	Software	Revised and re-written by incorporating the software used / statistical analysis methods. (line no. 81).
4.	If there is significantly differences, you should give results of groups according to the LSD or Duncan etc.	The manuscript significantly differences is made according to the LSD value considering this relation: When the maximum value (the treatment value of any parameter) - LSD value = "X" value. If the treatment value of any parameter is less than the "X" then it is considered as they are significantly differences between the treatments.
5.	Results and discussion should be supported by use of some graphs and/or figures	Results and discussion were presented based on the data provided in the table no. 1.
6.	If a farmer want to apply these biofertilizers + bio-control agents to their fields, what is these cost, is it economical or not? What are the other effects of biofertilizers + bio-control agents such as soil condition and fertility parametres etc?	The comment has been completely revised and re-written as desired by incorporating all suggestions. (Line No. :129-131)
