

**Editor's comment :**

I have read the manuscript and reviewers' comments and I find it well written and interesting. Just a remark; below each table the authors should specify the statistical analysis, i.e. what are the letters and which test was used.

Thereafter the manuscript can be accepted for publication.

**Author's feedback :**

The statistical analysis has been specified (i.e. ANOVA.) and painted yellow under each table.

The letters have already been specified in the legend; ( i.e. Means with the SAME LETTERS are not significantly different.) The letters are attached as indicators of significant differences among means.
