In addition, two control treatments were done, one positive where the bananas were sprayed in suspension of the fungicide (Q) from the dithiocarbamate @Mancozeb chemical family at 0.09 g. / 100 mL-1 of distilled water (Fungicide not indicated for control of anthracnose in banana in the post-harvest) and a negative control without the use of any type of treatment, sprayed only with distilled water (T) the same one used for the others treatments".
