

Editor's Comment:

I have reviewed the said article, entitled "Assessment of Attitude and Practice of Food Hygiene among Food Handlers in Ebonyi State, Nigeria" and found it to be of value as it addresses an initial component of the public health related to the levels of education of food handlers. It is conceivable that it will encourage larger studies to address the same issue. clearly, this is of great benefit to the society at large.

The fact that the sample is rather small may qualify the manuscript to be published as a short communication.
