

Editor's Comment:

The academic editor checked the 2nd revised manuscript carefully. It is apparent that some content of the manuscript have been improved. However, there are still some items unfinished and recorded as follows:

1. Figures 3-8 lack of the units of the physical quantities, for example, Ambient Temperature (°C).
2. In the Introduction, verb tenses should be considered past. The past tense is used to describe things that have already happened.
3. Double check the Conclusion. It is not clear and written in poor.

Hence, the academic editor thinks that the manuscript can be accepted, and all these points must be addressed before the paper is published.
