

Editor's Comment:

Concerning the manuscript entitled: (Epidemiological and Clinical Profiles of Children aged 0-71 Months Suffering from Acute Diarrhea at Kalembe-lembe Pediatric Hospital in Kinshasa city, Democratic Republic of the Congo)

As I went through the response of authors to reviewers comments and by checking the revised manuscript, it is clear that authors responded well to the reviewers comments, and therefore, this manuscript is to be accepted after adjusting the references., following the two following comments in reference section:

1. the page range is to be written similarly in all references
2. Thesis not to be cited as reference (authors cited thesis 1991, 1993, 2007 and others), are not these thesis published as research papers yet??. It is not accepted for authors to cite thesis.
