

Editor's Comment:

First sentence in the abstract needs revision.

Is it a descriptive study/ analytical study/ experimental study/Cross sectional study..?

Results: Give summary of findings in numbers not words.

How many subjects were recruited for study?

Did the researchers obtain written consent?

There seems some confusion in number of students enrolled for study-

In abstract:

Both interviews and observation were used to collect data from the field. Interview was conducted with 20 students from class XI comprising 10 males and 10 females in to mine the factors

Findings of the research:

In the table: In this study, Class 1, IX "A" has 38 students, followed by XI Science 'A' with 41 students (Class 2) and XI Science 'B' with 37 students (Class 3). The total number of female students is 53 and male 63 students.

Please clear this confusion.
