

**Editor's Comment:**

After going through the manuscript and the reviewers' comments I think one of the most important point raised in the manuscript is the linguistic problem.

And I would suggest that the authors consult either on line or someone with good command over language and get manuscript corrected grammatically.

Methods should be rechecked specially those related to the physico chemical parameters of soil samples.

They must pay attention to the details in Tables 2 and 3 in manuscript and answer to the queries put forward by the reviewer.

Discussion in the manuscript needs to be to the point and the use of repetitive words be avoided.

Therefore in light of above comments I suggest that the manuscript needs major revision before it can be accepted for publication therein.
