

Editor's Comment:

I gratefully acknowledge the opportunity to review the case study entitled "Intrahepatic multicystic biliary hamartoma: presentation of a case report and magnetic resonance imaging / magnetic resonance cholangiopancreatography findings".

I agree with part of reviewers this manuscript is not acceptable in its present form, and Major Revision is necessary.

My congratulations to the authors for their case and I suggest them :

- 1 - More detailed informations about the case, mainly related to the treatment and follow-up.
- 2 - A deeper Discussion of the case with more informations of the literature and pathophysiology of this disease. A comparative discussion of the literature and the present case will be welcome.
- 3 - The most recent reference is from 2011, the authors must bring up their study to date.
- 4 - The manuscript should be revised by an English language native physician.
