

Editor's Comment:

The editorial decision for Manuscript Titled: "Sero-prevalence and risk factors for hepatitis A virus infection among pregnant women at the Samandin Medical Center, Ouagadougou, Burkina Faso" is accepted with Minor changes.

Below are my comments

1. Abstract: The results section should be simplified and readable. Since none of the results are statistically significant, its wise not to include the statistics in the results section.

The quality of the tables in the manuscript is bad. I suggest making the tables again.
