

Editor's Comment:

I do not recommend it for publication in SAJRM. Please see following serious concern about manuscript for your kind reference.

1. What did authors mean by 'Staphylococcus aureus strain' and 'Staphylococcus aureus isolates'? How did the difference between various S. aureus strain identified?
2. Result and inference is over-interpreted.
3. Lack of novelty. Gentamicin and Ciprofloxacin are already identified and approved antibiotics.
