

Editor's Comment:

I am sending my comments regarding the manuscript Title: Intrahepatic multicystic biliary hamartoma: presentation of a case report and magnetic resonance imaging / magnetic resonance cholangiopancreatography findings.

After analysing the Case Report sent to the International Research Journal of Gastroenterology and Hepatology, I have some concerns that should be addressed.

1/ There are grammar mistakes throughout the manuscript- I have highlighted several of them in the attached file.

2/ The Authors of the paper gave incorrect information about the source of a quotation and copied many words from different sources, sometimes together with the same mistakes from the primary publication:

eg. „Von Meyenburg complexes is one of the polycystic liver diseases, characterized by bile duct hamartoma.” (Wiad Lek 2017, 70, 6 cz. I, 1137-1141

3/ Furthermore, the sentences : “MRCP can also help the differentiation of VMCs from liver metastases, polycystic disease and Caroli Disease, requiring the administration of intravenous gadolinium. Contrast enhancement is seen in metastatic lesions and Caroli Disease, and lack of communication of the biliary tree can be observed in the latter” [16,17]

have been cited from: Ann Hepatol. 2017 Sep-Oct;16(5):812-813. doi: 10.5604/01.3001.0010.2822. Multiple Biliary Hamartomas, The "Von Meyenburg Complexes". Jáquez-Quintana JO, Reyes-Cabello EA, Bosques-Padilla FJ.

and not from references No 16 and 17, as claim the Authors.

The above publication has not been mentioned by the Authors in the text of the manuscript.

I would recommend to check the report towards plagiarism.
