

Editor's Comment:

I have revised once again the manuscript under the title: Intrahepatic multicystic biliary hamartoma: presentation of a case report and magnetic resonance imaging /magnetic resonance cholangiopancreatography findings,

and here are my new comments :

1/ all references should be presented in the same way, so the Authors should check them all, not only the examples indicated in the brackets (I wrote etc.);

2/ It is a pity that the Authors are not diligent enough in their writing and do not pay attention to details of their manuscript- I have enclosed the next correction that is required before the consideration of the manuscript for publication.
