

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Food Science Journal
Manuscript Number:	Ms_AFSJ_45699
Title of the Manuscript:	Phytochemical Screening and Antioxidant Properties of Coagulants and Soft cheese Produced from Goat milk using Dfferent Biocoagulants of Plant Origin
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>please find attached my corrections and comments.</p> <p>I believe the authors carried most of the suggestions made, but there is still improvements to be carried from my point of view. In order for the works that are being published nowadays to be of better quality, not only results and discussion should coherent, but the methodology as well. The methodologies need to be consistent with their source (from where they were withdrawn) and as well as to the steps the authors followed to carry their own work. Scientists are entitled to modify methodologies, as long as they test them, and prove them to be consistent and adequate to determined type of samples. Further, I do not agree with the decision to removing the qualitative analysis from the work as they may be related to the quantitative results and even show discrepances that may exist among the assays carried out in the work.</p> <p>But this is up to you to decide in order to publish the work in this journal.</p> <p>I am available for further assistance you may need on this work .</p>	<p>The methodologies employed have been clearly stated and all the preparation procedures have been listed clearly. All the corrections have been made and the sentences badly written has been written properly.</p> <p>The qualitative analysis has been removed and the authors agreed to the removal of this analysis in this journal.</p>
