New title of the Manuscript:	CONTOURING AND PRESERVATION OF EMERGENCE PROFILE AROUND DENTAL IMPLANT IN ESTHETIC ZONE - CASE REPORT
Type of Article:	Case report

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>Pictures are of poor quality and showing those stages of implant placement which are not necessary to be shown.</p> <p>picture of half inserted and half exposed implant should not be kept??</p> <p>Another picture seems as if the flap has been just approximated and photograph taken and has been shown as a photograph 1 month later.</p>	<p>As per the evaluator comments half inserted and half exposed pic is removed.</p> <p>2nd comment- photograph 1 was clicked actually after 1 month of surgery. One can easily appreciate the post surgical healing and healing tissue collar which cannot be obtained on the day of surgery.</p> <p>References no 11 changes have been done</p>
