PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The authors want to tell us that brief food deprivation leads to measurable physiological changes. Why not tell us if the animals lost weight, how much, and was weight loss associated with the observed test changes?	Noted. Weight loss was observed but the study focused on memory sensitization, habituation and psychosomatic responses.
Minor REVISION comments	Table 1 repeats the methods. Tests were unblinded. Were animals randomized based on weight?	Noted, but not entirely, see the highlighted area. Thank you. All animals were within same age bracket of similar weight. Thank you once again.
Optional/General comments
