**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	This is well written paper, describing the role of micafungin in neutropenic patients after chemotherapy. In this monoinstitutional report no evidence of breakthrough infections were detected despite 4 positive GMs.	
<b>Minor</b> REVISION comments	Have the authors experience on IFI prophylaxis and breakthrough infections with other drugs in their center? Can they compare prophylactic strategies in children in a table? This could help readers throughout the paper.	This was the only IFI outbreak we observed in our center. Thus, we have no other experience to report and or compare with.
<b>Optional/General</b> comments	Introduction and discussion are too long	The introduction was reduced to 3 pages. The discussion was also revised and focused, especially in the last part.

**PART 2:**
