

Editor's comment :

- The abstract contains too much bibliographic, it must be reduced and added phrases to develop the objectives - the research methodology - the results of the paper.
- explain the research area, the main crops, the soils; including the experimental field, must detail the soil and its equivalence with international classifications.
- all tables must have a note below the table with the abbreviations used in the table.
- the text of the paper should be polishing, so that no words are stuck, determined values attached to the measuring unit; the work should not contain 0.00, it will be 0.
- the conclusions must be drawn from the paper and at least two conclusions added.

Author's feedback :

Please note that the Abstract has been revised in line with the Editor's comments. Also, we have attempted correcting the conclusions, removed 0.00 from the text. We feel that this revised version will meet your standard.
