EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>1. Concerning about the above mentioned manuscript, it is a well written manuscript -as reported by the reviewers- and it can be accepted for publication AFTER adding the following paragraph in introduction sector (for example), that was asked by the second reviewer and the authors added this paragraph in their response to the reviewer but not in the main manuscript. It is an important point of view to clarify the benefit gaining from the research either for the patient or the scientific research.</p> <p>2. The traditional identification of bacteria on the basis of phenotypic characteristics is not as reliable as recent identification which is based on genotypic methods. The ribosomal RNA sequence based analysis is an implicit and unique method to understand microbial diversity within and across a group and also to identify new strains (Olowe <i>et al.</i>, 2017).</p>	<p>The point raised has been included in the introduction.</p>
