PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	In the Fig. 9 - Back side of <i>Trichophyton mentagrophytes</i> : pale yellow color. I suggest to review because it is yellow very similar to the culture of <i>M. canis</i> . Describe the type of study. Make it clear that rabbits were part of the research and how many. In the title says to treat itself to be a review, but in the body of the work was not clear	Fig 9 was deleted The type of manuscript is review. In each head line I review study done in rabbit. Some paragraph are general like conventional diagnosis because they are same in different animals like direct examination and fungal culture I try to review different parts of the disease in rabbits
Minor REVISION comments	I suggest removing figure 4 because it is not of good quality and does not demonstrate the collection of the material. Line 12 - Dermatophytosis, Rabbit, Clinical feature, Diagnosis, Treatment	Fig 4 was delleted The use of comma in key words is needed
Optional/General comments
