EDITORIAL COMMENT'S on revised paper (if any)	Authors' response to editor's comments
<p>1. What did authors mean by 'Staphylococcus aureus strain' and 'Staphylococcus aureus isolates'? How did the difference between various S. aureus strain identified?</p> <p>2. Result and inference is over-interpreted.</p> <p>3. Gentamicin and Ciprofloxacin are already identified and approved antibiotics.</p>	<p>The word “strain” there was a mistake, its suppose to be Staphylococcus aureus isolates as its appeared in many places in the manuscript.</p> <p>Thank you very much, some adjustments were made Yes indeed, but because of increasing rate of S. aureus resistance to antibiotics, we tested the susceptibility of the organism to a range of antibiotics. Gentamicin and Ciprofloxacin were found the most sensitive/with the highest percentage. Thank you</p>
