**PART 1: Review Comments**

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
<b>Compulsory</b> REVISION comments	The intro is very lengthy and addressed mainly work done by previous authors. The objective is not clearly spelt out. Ascribing the reduction in the % oil in the pot bearing sorghum is missing leading as the oil may have dissipated through many other pathways e.g volatilization, degradation and absorption etc. In bioremediation experiment, it is very essential to determine the soil chemical properties as to know the health of the soil as reduction in soil oil conc would not have taken place without appropriate soil chemical properties.	
<b>Minor</b> REVISION comments	Suggested title : Potential of sorghum bicolor.L (Moench) and the effectiveness of some organic amendments in the remediation of spent-oil vitiated soil in Urbanite Kampala	
<b>Optional/General</b> comments	The word augmentation is not appropriate here since microbes are not used rather biostimulation . Also use amendment instead of enhancement	

**PART 2:**
