<b>Compulsory</b> REVISION comments	<p>This work presents interesting results for Brachystelma togoense schltr (Apocynaceae). The idea is good, but it needs to be improved.</p> <p>Introduction: could be more argumentative.</p> <p>2.1 Collection The aerial parts of Brachystelma togoense were collected in April 2018 from Ugbokolo forest, in Okpokwu local government area of Benue State-Nigeria. Why April ? If I do a sampling in December, for example, what can we expect in terms of constituents distribution? the same behavior ?</p> <p>The results from: NMR , HREIMS / Agilent Technologies 6550 iFunnel Q-TOF LC/MS, JASCO P-1020 polarimeter and the infrared spectra... all results must be presented and discussed.</p> <p>Why the combination dichloromethane and methanol?</p> <p>Did you find only 3 main compounds.... and other secondary metabolites? nothing? questionable.</p> <p>4. Results and Discussion (you have to bring a consistent argumentation... please, show your nice results... a rich discussion is expected)</p> <p>Conclusion: Please, improve. You have a nice work and you have to "sell" better your results.</p>
