Title of the Manuscript:	Pullback Absorbing set for the stochastic lattice Selkov equations
Type of the Article	

PART 1: Review Comments

	Reviewer's comment	Author's comment (if agree highlight that part in the man his/her feedback here)
Optional/General comments	Manuscript is sententious and deducible. Design, language and fluency are wonderful. Auyhors introduced a transformation of addition involved in special process is exploited to deal with the challenge in proving the property for the stochastic reversible Selkov system in an in ⁻ lattice .Proof of theorems are looking true. References are enough for this study. I recommend that this very valuable study can be accepted for possible publication in present form.	

PART 2:
