

### **Editor's Comment:**

I have gone through all the stages for evaluating the manuscript under review and my comments are as follows:

1. Two reviewers had reviewed the manuscript and categorized it into '**Minor revision**'.
2. One of the reviewers had mentioned about poor writing with grammatical mistakes.

I had gone through the manuscript. Unfortunately, the author's command on English language and writing skills are very poor. It is very difficult to interpret what message or findings author wants to communicate?

So, as per my view, the manuscript "**Isolation of Microorganisms from Fermenting *Parkia biglobosa* in Kuje Market, Abuja**" should be categorized under "**Major Revision**" and before any further decision on manuscript, my recommendation is that the author should rewrite the manuscript again in a more understandable way with correct grammar & logic. Additionally, Abstract should convey the message properly and discussion part also needs more elaboration.
