

Editor's Comment:

The re-revised version of the manuscript is still severely weakened by lack of clarity and flow, and poor prose and multiple grammatical errors.

The author ignored earlier comments, and plainly re-wrote some errors that the editor corrected/revised (e.g., compare v2 abstract and v3).

The manuscript need to be re-revised as previously suggested. All the comments should also be addressed.

The manuscript should be thoroughly edited and proofread to meet the high standard set for this journal.

Please see the attached manuscript with some edits that could be of help.

Final decision: Reject
