

Editor's Comment:

After reading the manuscript and reviewing the versions made by the authors of the manuscript, I have come to the conclusion of accepting it for publication, although I have comments towards the authors.

The reviewers have made a great revision; one in particular, Dr. Rajinder Kaur Gill, who has even rejected the manuscript.

The other reviewers have made suggestions that have been addressed.

I think the research work is good, maybe you should rethink as a short communication or as a short note.

The authors must follow the journal's norms and make the necessary changes, suggested by the reviewers before publishing them.

I conclude to accept it for publication, but they must make the suggested changes.

- 1.- The images are not well designed, the "X" and "Y" axes must be well defined.
- 2.- there should be no plagiarism
- 3.- the grammar must be correct
- 4.- the summary must be in accordance with the guide for authors.
- 5.- the authors must attend to the suggestions of the reviewers

I appreciate your trust.
