

Editor's Comment:

I still see many errors in the manuscript:

-Figure 2 is not mentioned in the text. The caption of Figure 2 should be modified to "Figure 2. UV-vis spectrum of as-synthesized SrO NPs.

- The text has to be deeply revised by an English speaker! I will appreciate that the authors devote enough time to this revision.

I have highlighted words and expressions in blue. Please, review them.

I have included comments in the text. Some of these comments are related to the fact that SEM, EDAX or FTIR are not chromatographic techniques. I do not understand how it is possible for authors to make such huge mistakes!

Again, and this is the last opportunity I give to the authors, they have to revise DEEPLY the text, figures, expressions, etc ... before sending the revised manuscript again.
