

### **Editor's Comment:**

#### Introduction

- I see that this paragraph has no importance in the introduction and in my opinion, it's better to remove it: The 2, 2-Diphenyl-1-Picrylhydrazyl (DPPH) free ..... indicates significant free radical scavenging activity of the compound or extract under investigation [19].
- Added another sentence to the introduction to indicate the objective to your research. For example. The aim of this study is to evaluate phenolic compounds and flavonoids of these two plants and their antioxidant activities.

#### Material and methods

- The extraction isn't described clearly, add the method of extraction ( hydrodistillation, maceration, ...), the quantity of plant taken, the methanol added and its concentration .
- Correct in the table 2 phytochemicals by plant extracts.
- The structures of the identified compounds from *C. hildebrandtii* and the structures of the identified compounds from *C. rotundifolium* shown in Figure 3 and Figure 3. It's better to remove all these structure from your research they haven't no importance to place them here.

#### Discussion

Compare your results with others researches on these plant species extracts.

#### Bibliography

1. Park EJ, Pezzutto JM. Botanicals in cancer chemoprotection. *Cancer Metastasis Rev.*, 21: 231–255. Added year to this reference
