

Editor's Comment:

After analyzing the suggestions made by the reviewers of this article, I am of the opinion that the English text needs to be significantly improved. Many sentences are still incomprehensible because too long. The title of the manuscript does not conform to the text content. Instead of improving aluminum-induced neurotoxicity, I think that Ginkgo biloba reduces this neurotoxicity. The manuscript must be reviewed both in form and substance before a publication authorization.

Please find in attached file a few comments.
