

Editor's Comment:

The manuscript still contains many shortcomings in the presentation which must be significantly improved at the standard level of scientific publications.

Concerning the title, the word "ameliorate" creates confusion between the words attenuate or mitigates or lessens on the one hand and increases on the other hand. I suggest that the author review the presentation of all the figures.

My different remarks are in the text. The article could be published after taking into account these suggestions.
