

Editor's Comment:

The main objection was the difficulty identifying Blastocystis in the photograph in the Ms, I am sending you two photographs to compare: one has been taken from another publication and the second is the photo by the authors of the Ms 45844.

Although the magnification is different, one should be able to distinguish Blastocystis, which I do not recognize in the Ms when comparing with the first photograph.

There is an additional revision with added comments on my previous one, Ms 45844 Blastocystis and camel milk.

I believe the authors should improve explaining the methodology and try to satisfy all other questions.
