

Editor's Comment:

The present article needs a clarification. It cannot be published in its actual form, because of the following remark: equations (12) represent only necessary conditions for the minimum problem formulated by (7). In order to equations (12) be also sufficient conditions, the author(s) should prove that H given by (6) is a convex function of variable $x=(k,a,b,c)$. Otherwise, the theoretical

basis of this article fails. On the other hand, eventual corresponding reference citations for (4),

(16), (17) are missing.
