

**Editor's Comment:**

Thank you for giving me the opportunity to give a final decision for the paper ((ESTIMATION OF SERUM LIPID PROFILE AND ITS CORRELATION WITH ALVEOLAR BONE HEIGHT IN CHRONIC PERIODONTITIS)).

The aim of the study was to find any significant correlation between HDL, LDL and cholesterol with periodontitis. The authors conducted a cross-sectional study.

The manuscript was reviewed by 4 reviewers.

Reviewer 1 recommended for minor revision, while Reviewer 4 advised for major (Serious) revision. Reviewer 3 opinion was for serious revision.

Reviewer's 2 opinions were to accept the manuscript without further modification.

From my perspective, I believe this study required major revision.

The author/s responded to reviewers comments in a proper way.

Its English is fairly good.

Furthermore, I do find its results interesting to readers.

My decision is to: **Accept** the manuscript.
