

Editor's Comment:

1/- It is of the most interest that the "Questionnaires" needs to be added as "Supplementary Data" at the end of the article to complete a better understanding of the data for the readers and to improve the article for the Journal.

2/- The English needs to be really improved by good English reader or by native English to correct many errors of language and many literature constructions in all the text and to better improve the article in its overall presentation for the readers and for the Journal.
