

Editor's Comment:

I have some comments.

The abstract should be structured: Introduction, objective, methods, results and conclusion. The authors should follow the template from journal.

In the text if use 2 or more references should write (2-6) not (2) (3) etc.

Delete the first 0 in P-value. P= .05

Title of tables and headings the authors only use capital letters.

The title of tables are incomplete.

I suggest that authors review the guidelines for references in the journal because there are some mistakes in list of references (por example in authors use and or number of journals or p (pages)).
