

Editor's Comment:

Please, find the editorial decision for the manuscript Ms-JEAI-49124 titled "Influence of the sowing speed on the distribution regularity of maize seeds" as well as my comments in the text of the revised manuscript.

The paper can be considered for publication provided that comments made are considered by the authors.

In the manuscript the authors have found that the maximum sowing speed for maize using a tractor-seeder set should be limited to 8 km h⁻¹. At 10 km h⁻¹ there are a reduction in plant population, a decrease in the sowing depth, and a subsequent decrease of yield.

Reviewers' comments considerably helped authors improving on the quality of the manuscript.

A certain number of scientific writing and English language mistakes persist that, if corrected, could further add value to the paper.

The Journal of Experimental Agriculture International is advised to publish the manuscript provided that the comments made on the text during the final evaluation of the manuscript are fully considered.
