

Editor's Comment:

My decision is: Serious Major revision. This paper cannot be accepted now with current submission.

Comments:

Overall, from my perspective, the authors really don't know what the structure of the review article. Please note that all the contents need to be developed with a structure of the journal paper, not a booklet introduction. My suggestions are as follows,

1. All the photos need to be reworked, clear is necessary, because all the photos are blurred and copied from other paper or internet.
2. Please don't use the "•" in the paper, the vocabulary after "•" need to be explained with a small paragraph.
3. In section 4, the History of MEMS need to be extended to year 2018, not 1987.
4. All the references need to be revised with a same format.
