

Editor's Comment:

For unknown reason the manuscript was only slightly improved. Most of my suggestions were omitted/ignored. Once again:

- The selected doses of the tested compounds have to be explained .
- Basic clinical observations and health status data have to be addressed.
- Part of results are presented in the material and method section (see table 1).
- The discussion is scanty. Limitations and clinical implications should be added to the study.
- List of references does not fallow the instruction for authors It does not pass criteria to any journal).
