

### **EDITORIAL COMMENTS:**

12 The leaf ethanol extract of *Ocimum gratissimum* was evaluated using GC-MS...

The correct form should be: The ethanol extract of a special leaf, *Ocimum gratissimum*, was evaluated using GC-MS....

-is needed a photo of this investigated plant.

-is 48 h good enough to extract the whole type of oil from the leaf? As far as I know, the extraction at room temperature lasts longer.

-Anti fungal activity should be given using photos (see ref: International Biodeterioration & Biodegradation 133 (2018) 210–215).

-English of the text is needed very careful correction.

### **AUTHOR'S FEEDBACK:**

The corrections have been made. The picture of the leaves has been attached. 48 hr can be enough to extract the whole type of oil from a plant if the plant is soluble in the solvent. *Ocimum gratissimum* leaf is very soluble in ethanol. For the antifungal activity, we are sorry we did not take the photos of the inhibition; we have taken note of that.

We are very grateful for your contributions to this work.
