

SDI FINAL EVALUATION FORM 1.1

PART 1:

Journal Name:	Asian Journal of Advanced Research and Reports
Manuscript Number:	Ms_AJARR_45541
Title of the Manuscript:	Comparative Studies on Synthetic and Agricultural Product on Lysine Production by Alcaligenes aquatilis
Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (Major revision)	Authors' response to final evaluator's comments
<p>In my opinion, the revised version of this manuscript under consideration is improved as compared to its previous version.</p> <p>In more details:</p> <p>The INTRODUCTION has been more informative, but still it is poor by taking into account the existing literature; thus, authors should enrich their Introduction, and improve the English syntax.</p> <p>Both sections MATERIALS AND METHODS, and RESULTS AND DISCUSSION were improved versus the previous version. Nevertheless, authors have not enriched the unified "Comparative difference between Glucose and Banana, ammonium sulphate and soybean" by relatively modern methods of comparison using reliable statistics [1] and to compare among the new results.</p> <p>Authors should thoroughly revise and improve the whole text, which still is not followed well.</p> <p>[1] There are a lot of statistical packets available free on request, in the internet</p>	<p>Introduction part has been modified with updated information. Grammar has been corrected</p> <p>We have revised the manuscript by incorporating the major issues and amended in the manuscript</p>
