PART 1: Review Comments

	Reviewer's comment	Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here)
Compulsory REVISION comments	The Author is advised to follow APA style both for inside citation and bibliographic citation, in letter and spirit. Most of the inside citations and bibliographic citations are not in accordance to with the APA guidelines. All references are very old except only 3. Very poor theoretical underpinning leading to unscientific conceptualization. As theoretical underpinning is very poor, the author could not build proper hypotheses. Just finding the effect of one IV on DV is a very poor research approach. How the random sample after stratification is not explained by the author Why a sample size of 200 was selected is not properly defended. No reference for the scale used is provided (The scale was developed, Adopted or Adapted?) The data analysis tools used are not scientifically defended as to why these were considered sufficient. Paired correlation values are not found to look for any multicollinearity issue.	I agreed with reviewer in some comments and the issues has been duly addressed. Sample number was decided due to the time constrain of this research.
Minor REVISION comments		
Optional/General comments		

As per the guideline of editorial office we have followed VANCOUVER reference style for our paper.
