

EDITORIAL COMMENTS:

- see from the title, I hope in this paper there is a description of the composition of fish species, the distribution of fish species, composition of fish species per time (January - December), composition of size and weight of fish. thus describing the ecosystem in the region
- in morphology description analysis is usually equipped with supporting images

AUTHOR'S FEEDBACK:

Description of the composition of the fish species.

The description of the composition of the fish species can be found under morphological description page 6 and 7.

The distribution of fish species.

The distribution of fish species can also be found in Table 1: Composition and relative abundance of fish species and families from inland waters of Kebbi state Nigeria, the presence of fish species in each station were given.

Composition per time and size and weight

From the last sentence under introduction “despite the considerable importance of small-scale fishing in Kebbi state, there were scanty published literature on species available in the inland waters, therefore, this present study attempt to complement the gap” and thus recommend for further research.

Supporting images

All images of five dominant fish family discussed can be found on page 8 plate 1 (A-E).
