Title of the Manuscript:	EXPRESSION OF HEAT STRESS BIOMARKERS IN WILD AND CULTURED AFRICAN CATFISH <i>Clarias gariepinus</i> (BURCHEL, 1822)
Type of Article:	RESEARCH

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>As I asked last time whether a study in an eatable animal should have been ethically approved prior to be conducted and the author did not have an approval, this is still a question.</p> <p>The other missing is how they collected blood for glucose analysis. It is unclear if they measure glucose from blood or other kind of specimen.</p>	<p>Studies in an edible fish, need not to declare an approval of ethical research. Moreover, procedures used in this study were conducted following the guidelines of the Council on the Protection of Animals Used for Experimental and Other Scientific Purposes.</p> <p>Blood collection and blood glucose sampling methods have been included.</p>
