

**Editorial Comments:**

The study is retrospective chart review of 10 year old data with minimal work up on etiology of neoanatal jaundice and adds hardly anything to the existing and emerging literature on the topic.

Line 48- kindly give referrence. American Academy of Pediatrics guidelines suggest pathological jaundice >16 mg/dl bilirubin levels in term infants.

Line 60- microbilirubin??

Line 66- "weight is excess"- kindly explain..

Line 82- "This study was designed ----- neonatal jaundice." Kindly rephrase

Table 3- why were babies with bilirubin level <12 included in the study?

Line 133- NRC full form is not mentioned in the study.

line 149- "late onset jaundice"- kindly define.
