Type of Article:	Original Research Article

PART 2:

FINAL EVALUATOR'S comments on revised paper (if any)	Authors' response to final evaluator's comments
<p>The inconsistency (heterogeneity) of some data does not permeate discussions or conclusions, as I had observed in the previous review.</p> <p>I understand that it is difficult to redo the methodology because the work is already done, but the authors can improve the explanation of the data with a consistent descriptive statistics, as I had also mentioned in the previous review, and again reinforce the need.</p> <p>It is important that authors understand that the text can be read by people of different nationalities and therefore, the text should be well explained.</p>	<p>Thank you for your valuable review. I tried to expand all those error and changed this currency into dollars and added the seasons which indicate there. Respected reviewer I did this analysis in Microsoft package (excel) but I didn't understand how could I changed my mean and SD value because I found this from my analysis. All those error you marked I tried to change this.</p>
