

Editor's Comment:

I looked into 2019/AJRCS/47225, and it is not fully ready for publishing, since there is one comment which authors didn't solve.

Namely, on page 5, authors are saying below Figure 5 (Population dynamics of PSB): „As shown in the Fig (a) and (b) it is clear that polynomial trend line shows no activity below 16°C temperature and zero activity above 34°C for the year 2017, statistically.“, and reviewers noticed that Figure number is missing.

From previous text it can be concluded that mentioned „Fig (a) and (b)“ can be also from Figure 2.

But, after analyzing the rest of the text, I didn't find any Figure 2 marked with „(a)“ or „(b)“!!!

So, before publishing authors must correct that confusion with Figures! (I am not sure why, but they made 11 (eleven!) figures with only one title, „Figure 2:...“; I can speculate they did that to save some paper space and not exceeding paper page limits, but they made a quite confusion both for reader and themselves!!!)

Author's Feedback:

1) Figure 6 and 7 describes the polynomial trend of White Stem Borer instead of Fig. 2 (a, b). I have corrected the file according to your instructions

2) Secondly, I have done some reshuffling in authors section. Cover page is attached with this email.
