

Editor's comments:

In the key words, let them decide to use one Language. If British, they should stick to that, If American, then use that. e.g. "centred" so choose one word to use and not interchangeable

They should have included the appendix section in order to add documents that could not fit into the body of the article e.g. the MMAT, 2011

Author's feedback:

The keywords section has been revised to conform to the British language version and include Keywords: Patient-centred care, patient-centred nursing care, patient centeredness, individualized care, negotiated care, quality nursing care, quality nursing, nurse-sensitive indicators, nursing outcome (s), nurse satisfaction, nurse job satisfaction and patient satisfaction.

The appendix section has been added and contains the MMAT tool (appendix 1) and the PRISMA-P tool (appendix 2).

Thank you.
