SDI Review Form 1.6

PART 1: Review Comments

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|-------------------------------------|--|---|
| Compulsory REVISION comments | This is case report and generally has addressed management in a standard way. There are some typos and these have been indicated. The references need to conform to the standard guidelines- Vancouver style. For a case report there are too many references- if the editor is okay with this, no changes need to be made. | I have changed the title from only casereport to casereport with review of literature |
| Minor REVISION comments | Check the typos | changed |
| Optional/General comments | Acceptable –this is not a unique presentation. Clinical presentation of haemoperitoneum in women should include ectopic pregnancy and ruptured corpus luteal cyst as mentioned. Other rare cases are also seen. Most cases may need laparoscopy; caution in employing MRI and CT as these are expensive in investigations. A fall in Hb need not be waited to occur before intervention. | |

PART 2:

| | Reviewer's comment | Author's comment (if agreed with reviewer, correct the manuscript and highlight that part in the manuscript. It is mandatory that authors should write his/her feedback here) |
|--|---|---|
| Are there ethical issues in this manuscript? | (If yes, Kindly please write down the ethical issues here in details) | |
