

Editorial Comments:

The manuscript is not very well organized, poorly written.

The objectives, general motives and main aspects of the problem and the results, as well as the use of this approach are not sufficiently explained. Comparison of the error for one specific example with some methods does not prove its effectiveness for the general theory of differential equations.

System (2.8) is written incorrectly.

Author's Feedback:

Thank you for your comments. We have tried to modify the paper as per the suggestions.
